Delete Task

Session Agenda

What we'll cover in today's kickoff session

01

Project Overview

The goal behind this project

02

Client Brief

The scenario and project ask

03

Project Requirements

What students must build

04

Technical Focus

Core skills this project builds

05

Tools

The stack for this project

06

Suggested Project Structure

Recommended folder layout

07

Submission Requirements

What and how to submit

08

Timeline

10-day development & review plan

09

Grading Criteria

How Project 01 will be scored

Project Overview

What we're building and why

GOAL

Build strong programming logic using Python by developing a console-based Task Manager application.

This project builds the reasoning and structuring skills every later phase — from data analysis to AI app development — will depend on.

PROJECT

Task Manager System

TYPE

Console Application

LANGUAGE

Python

STORAGE

File Handling (JSON)

Client Brief

The scenario behind this project

1

CLIENT

TechMaster Academy

2

PROJECT

Task Manager System

3

GOAL

Develop a simple task management application for managing daily tasks.

Project Requirements

What students are required to build

CORE FEATURES

- ✓ Add New Task
- ✓ View All Tasks
- ✓ Update Existing Task
- ✓ Delete Task
- ✓ Mark Task as Completed

DATA STORAGE

- ✓ Store tasks using File Handling.
- ✓ Tasks should persist after restarting the application.
- ✗ No database is required.

Technical Focus

The core skills this project builds

01 Python Fundamentals

02 Functions & Logic

03 File Handling

04 Problem Solving

Tools

The stack you'll use for this project

Python

VS Code

Git

GitHub

Suggested Project Structure

A recommended (not mandatory) folder layout

task-manager/

```
|  
├─ data/  
├─ main.py  
├─ tasks.json  
└─ .gitignore
```

KEEP IN MIND

Note: This is only a suggested project structure. You are free to organize your project as long as it remains clean and maintainable.

Submission Requirements

What students must submit at the end of Project 01

1

Push the project to GitHub

Commit and push your completed project to a GitHub repository.

2

Submit the GitHub Repository Link

Share the repository URL through the submission channel.

Timeline

How the 10-day project is structured

DEVELOPMENT

7 Days

REVIEW & FIXES

3 Days

Total Project Duration: 10 Days

Development

Students build the full Task Manager app — features, logic, and file handling — following the requirements.

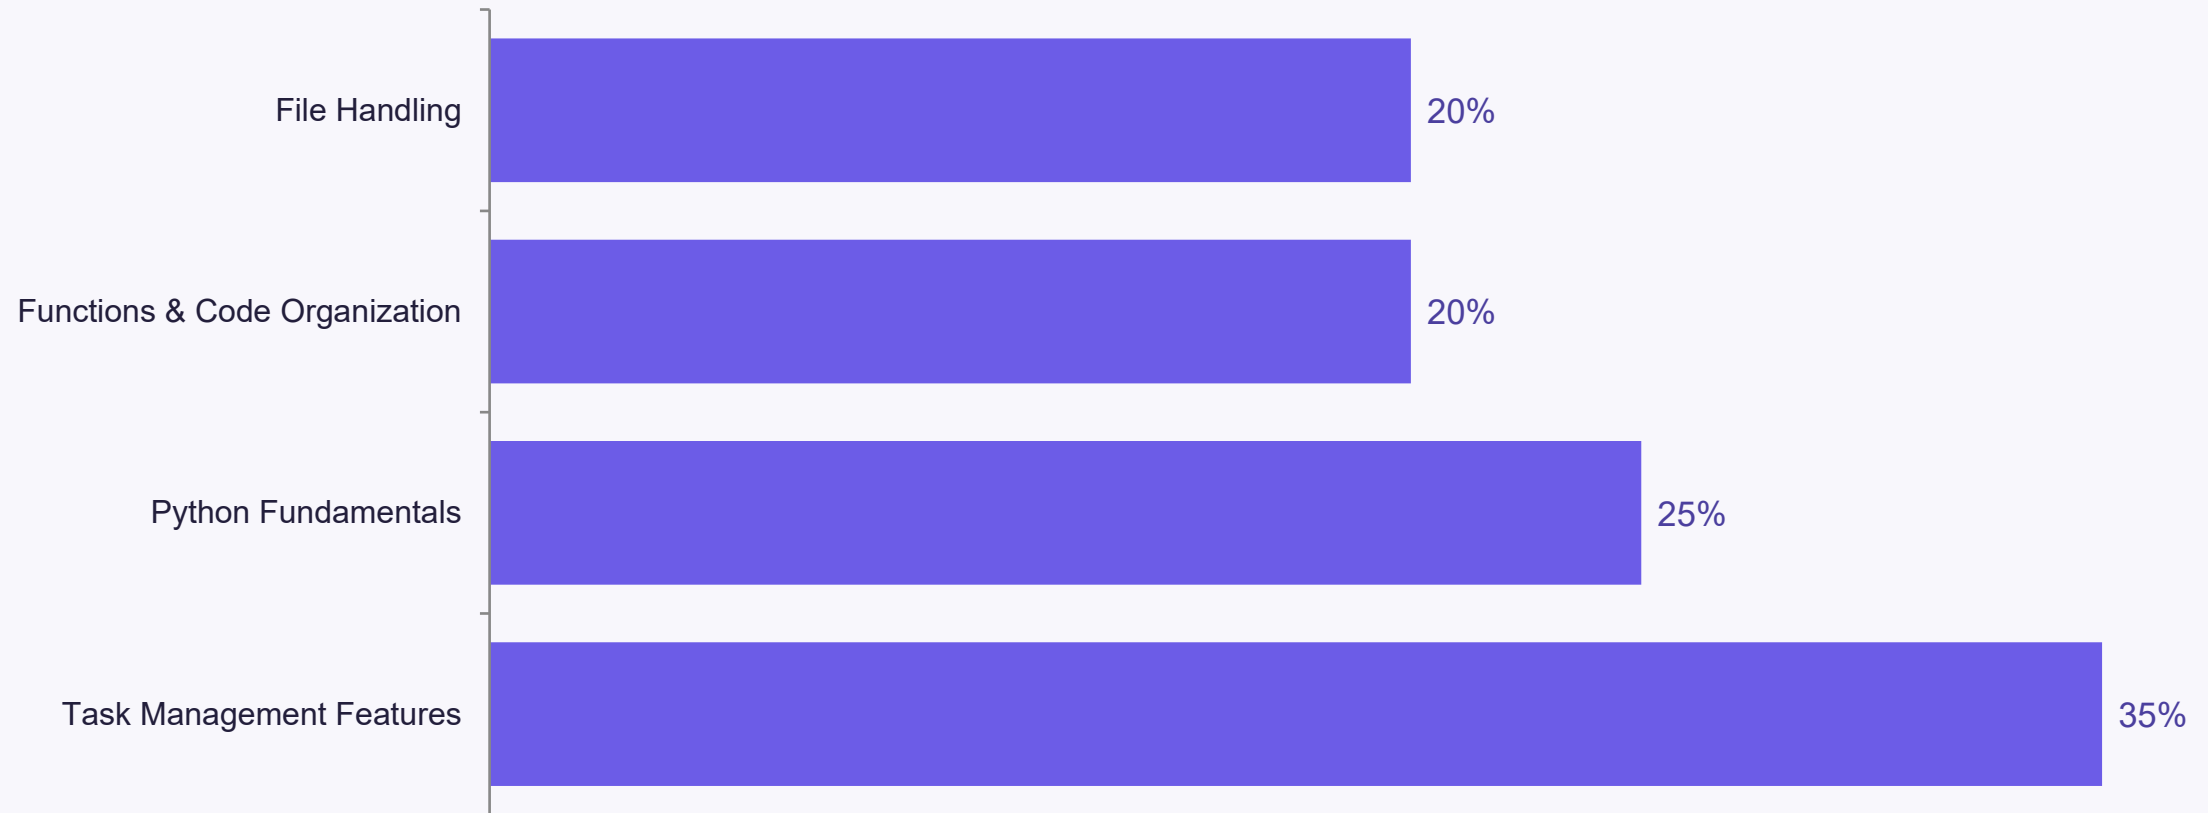

Review, Evaluation & Fixes

Mentors review submissions, provide feedback, and students address any issues found.

Grading Criteria

How Project 01 submissions will be scored

Good Luck & Happy Coding

Build something you're proud to put your name on. 🚀
